Sensors

- Interfaces
 - Grove, Linker Kit, Arduino
- I/O
 - 1.8V, 3.3V, 5.0V

Open Pipeline

- GPS
- I/O testing Mezzanine
- DSI Touch-enabled Display
- RPi Header (allow use of RPi HATs)
- HiFi DAC, Standard i2s mezzanine
- 802.15.4 (e.g 6LoWPAN)
- Remote Power Mezzanine (Cycle Mezz)
- More...

Handling Future Mezzanines

Manivannan Sadhasivam

**Linaro
connect**

San Francisco 2017

ENGINEERS
AND DEVICES
WORKING
TOGETHER

Types of Mezzanines we had so far...

- Level shifting Mezzanines
 - Sensors Mezzanine
- Analog Mezzanines
 - Arrow Linker Sprite Mezzanine
- Audio Mezzanines
 - Arrow Audio Mezzanine
- Camera Mezzanines
 - AiStarVision MIPI Adapter Mezzanine
 - D3 Camera Mezzanine
- Aerial Mezzanines
 - Aerocore 2 Mezzanine

Future Mezzanines

- I2S Mezzanine
 - External Codec to manipulate I2S output on LS header
- GPS Mezzanine
 - External GPS interface
- Robot Mezzanine
 - Motor controller, PWM generator
- Connectivity Mezzanine
 - LORA, Ethernet
- Security Mezzanine
 - Fingerprint, TPM
- Rpi Header
 - Allows to use Rpi HATs

Pain Points - Future Mezzanines

- Detecting onboard Sensors
- Automatically loading corresponding drivers
- Notification to kernel about addition of Mezzanine

Solution - Device Tree (DT) Overlays

- Proposed by Pantelis Antoniou
- In Mainline since 3.19
- Enabled by OF_OVERLAY Kconfig option
 - Selects OF_DYNAMIC && OF_RESOLVER by default
- Support added to libfdt by Free Electrons
- Need '-@' flag to compile both device tree and overlays
 - Adds __symbols__ in base device tree
 - Adds __symbols__, __fixups__, __local_fixups__ in overlays

devicetree
.org

Possible Methods of Loading DT Overlays...

Merging all overlays into base device tree	Doesn't makes sense
Using Configfs interface	Not recommended
Using bootloader to apply overlays	Preferred method
Using a clone of Cape manager to load overlays	Preferred but cannot be mainlined

**Linaro
connect**

San Francisco 2017

ENGINEERS
AND DEVICES
WORKING
TOGETHER

Using Bootloader to load Overlays

- Use bootloader to apply overlays before passing the pointer to kernel
- Need to specify the overlays via env variable
- Requires no change in kernel
- Much recommended
- Common bootloaders:
 - U-boot
 - Overlay support mainlined by Free Electrons
 - LK
 - No support exist
 - Patching should be easy since it is using libfdt

**Linaro
connect**

San Francisco 2017

ENGINEERS
AND DEVICES
WORKING
TOGETHER

Using Cape Manager to load Overlays

- Need to implement a new interface
- Storing overlays:
 - EEPROMs in Mezzanine
 - Linux Root File System
- 1 wire bus can be used for detecting Mezzanines
 - Bitbanged w1-gpio driver could be used
- Problematic if overlays are stored in RFS
- Should be done at the initial stage of boot process
- Support cannot be mainlined if it is platform specific
- Other SBC's are also supporting:
 - Beaglebone Black
 - Raspberry pi
